

Patent Application
Attorney Docket: 47253-00016

In the Abstract

Delete the four Abstract paragraphs on page 26, lines 3-23, and insert the following new Abstract:

A17
--A method and device for use, e.g., in a mobile telephone, for self-clocked controlled pseudo random noise (PN) sequence generation comprises a plurality of sequence generator units for outputting a plurality of sequence values (Z_i) on the basis of a plurality of clock values (C_i), and step pattern generators for selecting a step pattern, comprising said plurality of clock values (C_i), from a plurality of possible step patterns on the basis of a step pattern select signal (W_i). Thus, a flexible and efficient self-clocked controlled pseudo random noise (PN) sequence generation is obtained.--

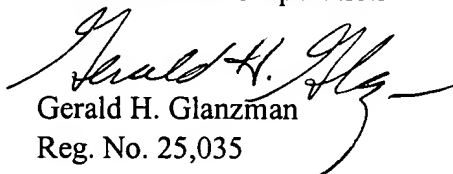

REMARKS

This Preliminary Amendment is provided to place the Specification, Claims and Abstract in a more proper form. EXHIBIT A attached hereto is marked-up to illustrate the changes that have been made in the Specification paragraphs and the Claims.

Early and favorable action is respectfully requested.

Respectfully submitted,

JENKENS & GILCHRIST,
A Professional Corporation
